GLENCOE

THIS WEEK

The median single family home price in GLENCOE this week is \$1,239,500. The 138 homes have been on the market for an average of 243 days.

The Market Action Index has been climbing lately while days-on-market are trending down, these point to a positive near-term outlook for the market.

QUARTILES

To get a tightly targeted understanding of homes in the market, we break each locale into quartiles. Each quartile is 25% of the homes listed.

Most expensive 25% of homes

Upper-middle 25% of homes

Lower-middle 25% of homes

Least expensive 25% of homes

We'll refer to the quartiles in the trend graphs below.

PRICE

Prices continue their climb again this week. We're a long way from the market's price high-point so watch the Market Action Index as an indicator of how long this trend will last.

QUARTILE PRICES

Often, we find insights by watching pricing trends within the quartile segments.

Prices have settled at a price plateau across the board. Prices in all four quartiles are basically mixed. Look for a persistent shift (up or down) in the Market Action Index before prices move from these current levels.

PRICE AND VALUE

While prices have been basically flat, the price per square foot has been heading downward. While not a sign of broad strength in a market, larger homes are coming more available and buyers are tending to get more home for their money.

INVENTORY

Inventory has been relatively steady around these levels in recent weeks.

Residential house prices are a function of supply and demand, and market conditions can be characterized by analyzing those factors. Watch this index for sustained changes: if the index falls into the Buyer's Market zone for a long period, prices are likely in for a downward correction.

The Market Action Index (MAI) illustrates the balance between supply and demand using a statistical function of the current rate of sale versus current inventory.

An MAI value greater than 30 typically indicates a "Seller's Market" (a.k.a. "Hot Market") because demand is high enough to quickly gobble up available supply. A hot market will typically cause prices to rise. MAI values below 30 indicate a "Buyer's Market" (a.k.a. "Cold Market") where the inventory of already-listed homes is sufficient to last several months at the current rate of sales. A cold market will typically cause prices to fall.

MARKET ACTION INDEX

The GLENCOE market is currently quite strongly in the Buyer's Market zone (below 30). The 90-day Market Action Index stands at 9. With several months of inventory available at the current sales rate, buyers should find ample choice.

Home sales have been exceeding new inventory for several weeks. Since this is a Buyer's market prices are not yet moving higher as excess inventory is consumed. However, the as supply and demand trends continue, the market moves into the Seller's zone, and we are likely to see upward pressure on pricing.

The quartiles can help you answer the question, "How hot is the market for homes in my price range?"

MARKET ACTION

Not surprisingly given the overall Market Action Index, all quartiles are in the Buyer's Market zone with several months of inventory given the current rate of demand for homes in the quartile. Watch the quartile for changes before the overall market shifts. Often one end of the market (e.g. the low end) will improve and signal a strengthening market before the whole group changes.

DAYS ON MARKET (DOM)

The properties have been on the market for an average of 243 days. Half of the listings have come newly on the market in the past 185 or so days.

DOM PER QUARTILE

It is not uncommon for the higher priced homes in an area to take longer to sell than those in the lower quartiles.

PRICE

The market for this zip code continues its bounce again this week. We're a long way from the market's high point so watch the Market Action Index to predict how long this trend will last.

PRICE PER QUARTILE

In the quartile market segments, we see prices in this zip code have settled at a price plateau across the board. Prices in all four quartiles are basically mixed. Look for a persistent shift (up or down) in the Market Action Index before prices move from these current levels.

- Lower-middle 25% of homes
- Least expensive 25% of homes

PRICE AND VALUE

This is a market where watching the value metrics (like price per square foot) can provide insight that you don't get at first glance. Despite the fact that home prices are rising fairly consistently, the price per square foot of homes listed is declining. Often this can be attributed to new and remodeled homes on the market. Buyers in the area are paying more but also getting more for their money.

INVENTORY

Inventory has been falling in recent weeks with 138 properties available this week. Note that declining inventory alone does not signal a strengthening market. Look to the Market Action Index to gauge whether buyer interest is falling with the available supply.

MARKET ACTION INDEX

The GLENCOE 60022 is quite strongly in the Buyer's Market zone. The 90-day Market Action Index stands at 9. With several months of inventory available at the current sales rate, buyers should find ample choice.

MARKET ACTION

Not surprisingly, all quartiles are in the Buyer's Market zone with several months of inventory given the current levels of demand. Watch the quartiles for changes before the overall market shifts.

DAYS ON MARKET

The properties have been on the market for an average of 243 days. Half of the listings have come newly on the market in the past 185 or so days. Watch the 90-day DOM trend for signals of a changing market.

DAYS ON MARKET

It is not uncommon for the higher priced homes in an area (Quartiles 1 and 2) to take longer to sell than those in the lower quartiles.
